

SANDING SYSTEM SANDMAUS®

DESCRIPTION

The sanding system Sandmaus® permits to increase the train adherence at the wheel/rail interface.

OPERATION

- ▶ Ventilation system permits an optimal protection against the humidity accumulation.
- ▶ Delivers a constant quantity of sand on the rail, independently of the filing level.
- ▶ Precise dosage: reduces the risk of the train detection system error.

ADVANTAGES

- ▶ Works with traditional sand and MBM RailGrip sand (requires less sand).
- ▶ Conform to the German norm for the border transports.
- ▶ Very economical product in compressed air.
- ▶ Can be installed on most of vehicles thanks to its conversion kit.
- ▶ No mobile piece, no wear, no maintenance.
